

Anul european al dezvoltarii durabile in Douzelage
Year of sustainable development in Douzelage

REPORT

Preparatory conference
for
'Sustainable Development
from Idea to Reality'

22|23|24 January 2015

organised by Douzelage Meerssen,
initiated by Siret

Europe
for Citizens

Content

5	Goal of the conference 'from idea to reality'
	Conference program, held in January 2015
7	Welcoming words: Mayor Meerssen and Chair Douzelage Meerssen
8	Summary Fire Salamander under threat from deadly fungus presentation by Raymond Creemers
9	Summary Meet the Bees presentation by Doris Bauer and Marc Thiel and Michelle Goedert
11	Summary Moerveld presentation by Hans Webeling
12	Impression visit Moerveld
13	Summary Buitengoed Geul en Maas presentation by Mirella Wolfs-Partouns
14	Impression visit Vaeshartelt (Buitengoed Geul en Maas) presentation by Marianne Winthagen
15	Summary The district of Tomorrow, a transition project towards energy neutral cities presentation by Jacques Kimman
16	Summary Eisleck Trail presentation by Sébastien Este
17	Summary Parc Naturel des deux Ourthes presentation by Vincent Vander Heyden
18	Summary The construction of sustainable houses presentation by Nicolas China
19	Summary Consortium Grensmaas presentation by Peet Adams
20	Impression visit Grensmaas
21	Summary Le Contrat de rivière Ourthe presentation by Sophie Duchateau
22	Summary District of Tomorrow and impression guided tour
23	Summary Canal historique de Bernistap presentation by Luc Nollomont
24	Workshops 'from idea to reality'
25	Final statement of Douzelage sustainability conference Meerssen

Appendices

i	Publicity
iii	List of participants
iv	Presence table, 22 January 2015
x	Presence table, 23 January 2015
xvi	Presence table, 24 January 2015

Digital appendices

xxii	Program SD conference Meerssen
xxiii	Welcoming words mayor Meerssen
xxiv	Powerpoint presentation on the Fire Salamander
xxv	Powerpoint presentation on Meet the Bees
xxvi	Pdf presentation on Moerveld
xxvii	Prezi presentation on Buitengoed Geul en Maas
xxviii	Pdf presentation on Buitengoed Vaeshartelt
xxix	Powerpoint presentation on District of Tomorrow
xxx	Powerpoint presentation on the Eisleck Trail
xxxi	Powerpoint presentation on Parc Naturel des Deux Ourthes
xxxii	Powerpoint presentation on the construction of sustainable houses
xxxiii	Movie on the Grensmaas project
xxxiv	Powerpoint on Ourthe river contract

Goal of the conference 'from idea to reality'

Program

Thursday, 22 January 2015

09.30 - 09.50

Meet and Greet with coffee and Limburgse Vlaai (cakes)

09.50 - 10.00

Opening of the conference by Annigje Kruytbosch, chair Douzelage Meerssen and drs. A. Cremers, mayor of Meerssen

10.00 - 10.40

Project fire salamander

Lecture by drs. Raymond Creemers, senior ecologist and team manager of the board of RAVON (Institute for research on reptiles, amphibians and fish in the Netherlands)

10.40 - 11.20

Meet the Bees

Lecture by Doris Bauer, Michelle Goedert and Mark Thiel, members of station biologique de SIAS, Niederaanven

11.20 - 11.40

Coffee/Tea break

11.40 - 12.30

Moerveld and objectives related to sustainability

Lecture by Hans Webeling, founder and director of Foundation Moerveld

12.30 - 13.30

Lunch

13.30 - 14.10

Revitalizing of old industries, old villages and districts in relation to quality of life and sustainability

Lecture by Mirella Partouns, program manager of "Buitengoed Geul en Maas"

14.10 - 15.00

De Wijk van Morgen (The District of Tomorrow)

Lecture by prof. Jacques Kimman (Zuyd University of Applied Sciences)

15.00 - 15.30

Coffee/Tea break

15.30 - 16.00

Lecture by Sebastien Este: **Eisleck Trail**

16.00 - 16.30

Lecture by Vincent vander Heyden, director of '**Parc naturel des Deux Ourthes**'

16.30 - 18.00

Workshops about the different themes for the next day. On Friday we will visit various projects. In the workshops we will prepare questions about these projects, and how we can document these projects for further use in Siret.

Discussion on how our input and common knowledge can be used regionally and on a more international basis, presented in Siret.

18.00 - 19.00

Guided tour of highlights of Meerssen: Basilica, Gloriette, Synagogue with mr. G. Kockelkorn, former mayor of Meerssen

19.00 - 22.00

Dinner at Restaurant "Sam Sam", Volderstraat 31, 6231 LA Meerssen

Program

Friday, 23 January 2015

08.15 - 09.00	Departure from Ontmoet Anna, Stationsplein 1 by bus. Meet and Greet with coffee and Limburgse Vlaai at Hartelstein, Hartelstein 204, 6223 HV, Maastricht
09.00 - 09.30	'Canal historique de Bernistap' Lecture by Luc Nollomont
09.30 - 10.00	Presentation about the Grensmaas and Emmaus project by Peet Adams, responsible county official
10.00 - 11.00	Departure by bus and guided tour of the new landscape of the Grensmaas (walking shoes needed)
11.00 - 11.30	Transfer by bus to Buitenplaats Vaeshartelt , Weert 9, 6222 PG, Maastricht
11.30 - 12.00	'Contrat de rivière Ourthe' Lecture by Sophie Duchateau
12.00 - 13.00	Exposé on the philosophy of "Buitenplaats Vaeshartelt" and a tour, conducted by
13.30 - 14.10	Marianne Winthagen, director of Buitengoed Vaeshartelt. We will pay a short visit to the bees' pavilion on the way. (walking shoes needed)
13.00 - 14.00	Meal composed of organically grown products from the gardens of "Buitenplaats Vaeshartelt"
14.00 - 14.30	Transfer to Moerveld, Hazenstraat 1, Moerveld, Geulle
14.30 - 15.00	Tour of Moerveld (walking shoes needed)
15.00 - 15.30	Transfer to 'De wijk van Morgen' (The District of Tomorrow). Tesla 1, 6422 RG, Heerlen
15.30 - 16.30	Guided tour of 'De wijk van Morgen', the 'District of Tomorrow'
16.30 - 17.00	Transfer to Arno Claessen's house: a local example of an energy-neutral building
17.00 - 17.45	Visit to Arno Claessen's house
17.45 - 18.00	Transfer to Ontmoet Anna
18.00 - 18.30	The construction of sustainable houses Lecture by Nicolas China
18.30 - 19.00	Transfer to Valkenburg by car
19.00 - 22.00	Dinner at Stella Maris College, Valkenburg, Keelstraat 1, 6301 XT, Valkenburg

Saturday, 24 January 2015

09.00 - 09.30	Meet and Greet with coffee and Limburgse Vlaai
09.30 - 11.00	Workshops to prepare presentations in Siret
11.00 - 11.30	Coffee/Tea Break
11.30 - 13.00	Presentation for Siret Houffalize, Meerssen and Niederanven draw up a joint Communiqué for Siret and will present this in the General Meeting in April 2015
13.00 - 14.00	Sustainable meal
14.00 - 14.30	Departure of Meerssen's guests

Program as presented in January 2015: appendix xxii

Welcoming words from Annigje Kruytbosch,

chair Douzelage Meerssen

Welcoming words from Armand Cremers

mayor Meerssen

Welcome ladies and gentlemen to our Preparatory Meeting on Sustainable Development organised by the Douzelage Meerssen!

The topics that will be discussed these coming days are of mutual importance to us all.

The outcomes will be gathered by us and distributed to you, as participants, but also will be used as a tool for the General Meeting of the Douzelage in Siret in Romania, which will be held in April this year.

All the Preparatory Meetings that are held within the Douzelage towns of the EU as we speak, will draw up conclusions together in Siret!

It will prove that we have many common grounds, common 'problems' and hopefully we will be able to learn and implicate from it outcomes.

It is of significant importance that a road map or infrastructure thanks to the Douzelage towns, can be used to learn more on an International basis and could be put into practice locally!

But also your local or regional sustainable project, presented during the course of this conference, will be an inspiring example for other Douzelage towns and regions in the rest of Europe!

I wish to express my special thanks to the people of Niederanven and Houffalize who not only are present here today but also prepared on a very short notice, interesting topics for us to understand and to discuss. It proves that the Benelux is very much alive!

Then I would like to thank all of you who are going to do a presentation these following days. We are very thankful for your input!

And ofcourse I would like to thank all local and regional NGO's that have enthusiastically supported this conference.

Also a warm welcome to alderman Houben and to all I forgot to mention but without any doubt are as important to our cause and this conference!

In order to keep my welcoming words within the 5 minutes I was given, I would like to invite you to take a look at the program in order to see who is who.

Not in the program are the ones without who this conference wouldn't have been so quickly managed.. Well done!

First of all many thanks to Jos Kester to whom we owe this lovely location and who was of major importance to us during the preparations of the conference.

Also many thanks to Irene Raedts, Wil Schrijnemakers, Pascale Vossen, Bert van Doorn and last but not least Harry Crombag, who put in a huge effort while also moving houses, renovating and redecorating! I hope it's an energy neutral home?

It is such a honnour you have you all here today! So let's start making a difference! But just before we start, I like to introduce you to the mayor of Meerssen. Unfortunately he couldn't be present at our opening, but sent us his welcoming speech through digital means.

Thank you Armand Cremers!

Welcoming words Armand Cremers (in french): appendix xxiii (mp4)

Summary

Fire Salamander under threat from deadly fungus

presentation by Raymond Creemers

Teammanager and senior ecologist RAVON

Fire salamanders are spectacular colored (black & yellow) amphibians. This land salamander lives in forests with small brooks. They give birth to live young, eggs develop in the female salamander and the larvae live in small brooklets. The fire salamander is in the Netherlands a rare species with a limited range in the extreme south of the province of Limburg. Volunteers detected a spectacular decline in the number of fire salamanders in the three remaining populations. Within a few years the population suffered losses of at least 96%. By 2012 RAVON started the action plan SOSvuursalamander. The conservation plan contains several aspects:

- field and laboratory studies to find out what's causing the enigmatic decline
- safeguarding some of the last salamanders
- start of a captive breeding program
- PR and crowdfunding projects

Within one year (september 2013) an international team of scientists identified a formerly unknown killer fungus as the cause of the decline. It's the second time a fungus is causing mass mortalities amongst amphibians and the first fungus was worldwide characterized as the most dangerous disease amongst vertebrates.

Meanwhile the fungus is responsible for outbreaks in nearby Belgium and we expect that the fungus will spread over Europe within the next decennia. In October 2014 experimental test in laboratory conditions proved that the fungus was affecting all salamanders, which means that an entire group of animal species is under threat and possibly driven to extinction.

Summary

Meet the Bees

**presentation by
Doris Bauer and Marc Thiel**

Co-workers Biologic Station SIAS

and

Michelle Goedert

Teacher at École Am Sand

Within the past 100 years, the number of beekeepers in Luxembourg decreased by 90%! The number of beehives decimated in the same time by 75%. One of the most traditional handcrafts in Luxembourg is in a precarious situation, which could evoke serious problems in nature, e.g. the colonisation of many plants. Many initiatives started during the past 5 or 6 years to stop this unfavourable development. One of those initiatives is the „Meet the bees“ project of the biological station SIAS, which not only has an impact on the apiculture in Luxembourg, but also has an very important social character.

The number of beekeepers in Luxembourg decreased between 1902 and today from 3500 to 350 beekeepers! To save apiculture from extinction, we need projects focused on increasing the number of beehives and the number of beekeepers in Luxembourg. The biological station of the SIAS-syndicate has the task to develop projects linked to nature conservation into the 8 member communes, that are Betzdorf, Contern, Junglinster, Niederanven, Sandweiler, Schuttrange, Weiler-la-Tour and Frisange, situated East of Luxembourg-city. A project with the objective to save the bees and promote beekeeping suits perfect into the portfolio of ecological projects of the biological station SIAS, such as increasing biodiversity, reducing pesticides or protecting orchards.

In spring and summer 2013, we organised in collaboration with Roger Wenkin (local beekeeper) and the local beekeeper association practical sessions for the general public where they could learn all about beekeeping. The objective was to offer people interested in beekeeping a first experience with bees without having to invest in any equipment or bees.

The sessions targeted people who lived in the communes related to SIAS. A number of English-speakers attended as well. Of the 70 people registered in SIAS' beekeeping demonstration mailing list, approximately 30 people regularly attended these sessions. As the sessions were attended by Luxembourgers and foreigners, the group was split into one Luxembourgish-speaking and one English-speaking group. After the sessions in spring and summer 2013, many participants decided to start their own apiculture. Therefore, in 2014, we tried to find mentors to help the new beekeepers to set up their own apiary. Also in 2014, we offered the second season of practical session for people interested in beekeeping; our project now has 2 parts:

1. practical sessions for beginners (demonstration courses); and
2. beekeeping with mentors for people with knowledge and their own bees.

The second part of the project is very important as the success of beekeeping is dependent on the experience you have. To have a mentor to whom you can ask questions and to discuss opinions is very important during the first years of beekeeping. Unfortunately it is difficult to find local, experienced beekeepers willing to spend time in mentoring new beekeepers.

We are now extending the project to have a third component: sharing equipment (such as a honey extractor and a wax melter) that can be expensive to purchase. This shared equipment will be made available to the new beekeepers.

But the bee project is more than only a project for the promotion of beekeeping in our partner communes! As the 8 SIAS-communes are located close to Luxembourg-city, many foreigners who are living in Luxembourg, visited our courses. In Luxembourg, nearly half of the population is not of Luxembourgish origin. The bee project brought together more than 13 different nationalities from all around the world. People, who live together in the same country (and sometime even in the same city!) got to know each other through the bee project. An english speaking beekeeper group was established out of our project. For the first time in the history of beekeeping in Luxembourg, the beekeeper association has a group non-Luxembourgish beekeepers. This shows, that the bee project is more than a project about bees, but it is also a project about including foreigner into the Luxembourgish community.

In 2015, the commune of Niederanven will build a didactic apiary, so that not only the beecourses for future beekeepers can be provided at this place, but also the local school can use this apiary to learn about bees, nature and ecology. This will open the project for pupils and children and bring together different generations.

Summary

Moerveld

presentation by Hans Webeling

Founder and Managing director of
Foundation Moerveld

Is an educational initiative, creating an area (1,2 hectare) where schoolkids are able to experience prehistoric life and nature. A lot is learned about sustainable development and thus carried onwards to the future.

After having worked 8 years as a manager for CNME-Parkstad in 2008, together with his partner Madelein Scheeren, Hans Webeling realized the start up 'NME-atelier' in Maastricht. What set the projects regarding the outdoors, the natural environment and cultural heritage dedicated to schools apart, turned out effective in the following years. At first just for primary education, but by now also responding to a demand from undergraduates for 'green' subjects. At first limited to one municipality (Meerssen), but by now serving the Southern part of the Limburg province.

In 2011 NME-atelier's green as well as social drive resulted in the purchase of a 1,2 hectare piece of land in Geulle (belonging to the Meerssen municipality). An area of natural land, hidden between fields and the Bunderbos, intended to enhance the school projects. Behold the birth of the hands on educational outdoor centre 'Moerveld'. The pre-eminent prehistoric site for tens of schools from near by municipalities. Educational projects regarding the natural environment and cultural heritage are created and realized on mud level. The stories around the campfire, an ice age hunting camp, ceramic band age settlement, a timbered house, a smith's timbered house, pre historic race pigs, pre historic race sheep, beekeeper, archery, making fire, cutting wood and bone, making felts etcetera.

Summary

Buitengoed Geul en Maas

presentation by
Mirella Wolfs-Partouns

Program manager Buitengoed Geul en Maas

Summary 'Buitengoed Geul en Maas'

Presentation by Mirella Wolfs-Partouns

'Buitengoed Geul en Maas' (BGM), which roughly translates as 'Geul and Meuse estate' tries to (re)develop the lower valley of the River Geul and an area north of the city of Maastricht.

Regional cooperation, initiated in 2008 from the Maastricht regional fund, between local governments of Maastricht, Meerssen and Valkenburg and the county (Limburg), is continued especially for BGM. Inhabitants, visitors, entrepreneurs and local government are cooperating in BGM to (re)develop cultural heritage, natural values and water management, also trying to make the entire project economically viable.

Our approach is as follows. Local and regional government create the conditions in which the 'Buitengoed' can be developed and seek out parties wishing to take initiatives towards that development, in order to see them realised.

Making the connection between different parties taking different initiatives is crucial to make individual projects evolve into a communal effort. Involvement springs from the participation of volunteers, entrepreneurs, community- and local associations, schools and specific groups. On the one hand we bring together groups or people who are in the same area and try to create synergy between them – if they hadn't already done that themselves.

On the other hand we connect people on the basis of themes that relate to multiple areas inside the 'Buitengoed'. Examples of such themes are:

- finding new purpose for unused estates
- development and sustainable guardianship of the land
- participation
- access and opening up

Apart from current projects (approved by Regiofondsen) we aim to launch pilots relating to these themes, so that concrete action will teach us how to gradually develop the 'Buitengoed' together with all interested parties.

Summary

The district of Tomorrow a transition project towards energy neutral cities

presentation by Jacques Kimman

PhD in Physics at University of Amsterdam on
multiphoton-spectroscopy
Industrial R&D at IBM (California) and Océ
Program manager solar energy at an Agency of the
Ministry of Economic Affairs
Professor in New Energy at the South University in
Heerlen, the Netherlands
Sub-task leader IEA, Annex 63, Implementing Energy
Strategies in Communities
Co-founder of the research institute RiBUILT (Research
Institute of the Built Environment of Tomorrow, including
transition management and the implementation of sus-
tainable materials and energy in the built environment).

The transition towards a renewable energy supply needs a lot of coordinated effort. In the first place one needs to define the ultimate goal of the transition. For this future projection of the city one needs to organize support and commitment of all stakeholders. One should convince people that it is not only necessary to reach such a goal because of climate effects and shortage of energy but it will be also pleasant to live in such a city (quality of life) and it has enormous economic advantages. In this way sometimes energy can become the solution instead of the problem as a financial source for sustainable retrofit. Although the social and environmental urgency of such large-scale integrated retrofitting of the building stock is widely acknowledged and supported, no structural, large-scale retrofitting process and systematic approach have yet been devised. Therefore, a major transition and transformation should take place in the building sector in the next few years, where the role of the public sector, the building sector (industry) and the citizens will be clarified, reinforced and dynamically co-ordinated.

Renovation of the building stock to higher energy performance requires that a wide range of technical, economical, architectural and behavioral requirements are fulfilled. These aspects are interconnected and often point towards contradictory measures, which justify pursuing inter-disciplinary research in order to develop knowledge and a comprehensive and holistic understanding of the effect of different energy upgrade measures.

In this presentation the transition process is described in terms of the implementation of a roadmap towards energy neutral cities. The best practices can be derived for instance from the IEA, Annex 51 "Energy Efficient Communities" and Annex 63, "Implementing Energy Strategies in Communities". At the South University we developed a bottle-neck analysis to optimize the knowledge transfer between cities end to derive the necessary measures and research programs for innovations.

From the best practices we derived the state of the art of the approach for the individual issues, making use of the large variety of boundary conditions in different countries.

At the South University we are constructing the "District of Tomorrow" together with students and companies as a transition project to demonstrate what is possible tomorrow with the techniques which are already available now, to educate students, to enable a innovation platform for companies and organize cooperation between all stakeholders. This project is adapted in our region as a transition project which works as a catalyst for the transition process, in which we make use of learning experiences and solutions of all the best-practices of IEA-partners.

Summary

Eisleck Trail

presentation by
Sébastien Este

Urbanism - landscape - tourism at PNDO

This trail is part of an action programme seeking to highlight the heritage of the Belgo-Luxembourg Ardennes. Funded by the European Union, the Walloon Region and the Luxembourg state, this cross-border project was launched in May 2009 to be completed in late 2012.

This has led to the creation of a major cross-border trail of discovery, the 104 kilometres ESCAPARDENNE Eisleck TRAIL, signposted in two directions, as well as six loop trails of discovery, of varying lengths, to be undertaken according to your liking.

The 104 km ESCAPARDENNE Eisleck TRAIL is divided into five stages, to enable hikers to stop at various places, enjoy the hospitality and travel light the next day thanks to the luggage transport service provided by two tour operators.

Summary

Parc Naturel des deux Ourthes

presentation by Vincent Vander Heyden

Managing director PNDO

Located in the midst of the Ardennes foothills, the Deux Ourthes Natural Park has been developed around two sites of huge importance in terms of natural resources: the Tailles Plateau, overlooking the area from a height of about 600m. It is teeming with an amazing array of flora and fauna in protected biotopes. The confluence of the eastern and western river areas of the Ourthe, which meet at Engreux, next to the Hérout site, forming the Ourthe to continue on its fast turning way northwards, where awe-inspiring sites appear.

The area mainly consists of agricultural plateaus and deep valleys whose sides are occupied by the forest. The enhancement of this splendid area will allow visitors from all walks of life to enjoy nature and a heritage we are delighted to showcase to the best effect...

The Deux Ourthes Natural Park covers the six municipalities of Bertogne, Gouvy, Houffalize, La Roche-en-Ardenne, Sainte-Ode and Tenneville. Roughly 22,000 people live in this 76,000-ha area, which was created pursuant to the Walloon Government's 12 July 2001 Decree.

Aims:

Nature conservation:

- making the most of all the potential opportunities for accommodating wildlife throughout the area as a result of creating an ecological network and a major advocacy campaign;
- defining the management procedures for the miscellaneous ecological network sectors and involving the administrators.

Environmental protection:

- informing people and making them aware of the efforts made to manage water sources, air, waste, the energy policy being conducted...

Land planning:

- maintaining the quality and the appeal of the natural and built landscapes;
- working against the background of the European Landscape Convention;
- helping to produce a consistent image of the area.

Rural and economic development:

- Agriculture: boosting the vital role farmers play in maintaining the rural character and seeing to the upkeep of landscapes, providing incentives for the creation of local products;
- Forestry: successfully reconciling the myriad functions of the forest;
- Tourism: improving the standard of eco-tourism as a result of protecting the natural environment surrounding us;
- Business: helping to take advantage of mixed economic activity areas.

Summary

The construction of sustainable houses

presentation by Nicolas China

Managing director
'China Toitures et Ossatures bois'

On le sait, on le dit, le développement durable s'inscrit aujourd'hui comme l'une des principales voies de conscientisation quant au monde de demain et de son habitat. Jeune entrepreneur convaincu du besoin de bâtir en accord avec notre environnement naturel, j'ai moi-même contracté ce 'virus' au cours de ma formation de bachelier en construction.

Certes, mon concept n'a rien de vraiment révolutionnaire, mais il s'inscrit dans une démarche honnête et réfléchie visant à la mise en œuvre d'un matériau séculaire avec des techniques actuelles, au sein d'une entreprise familiale réputée dont la seconde génération ne demande qu'à vous faire découvrir ses propres qualités et capacités.

Sur le modèle dit platform frame, une technique notamment apprise au cours de nombreuses heures de formation au Centre de Compétences Wallonie-Bois, à Libramont, et complétée par les cours théoriques du Centre national de développement du bois à Paris.

J'ai également suivi pendant deux années une formation continue à l'UCL qui m'a permis d'approfondir mes connaissances sur la construction en bois, sur l'hygrométrie spécifique de ceux-ci, sur l'isolation tant thermique qu'acoustique, et sur l'importance d'une excellente étanchéité à l'air.

Pourquoi construire une maison à ossature bois?

- Au delà d'un phénomène de mode, les maisons à ossature bois présentent d'indéniables qualités qui contribuent à un confort accru et une ambiance de vie plus saine. Son choix résulte d'une véritable réflexion sur le lieu où nous vivons, où grandit notre famille...

Le bois est un matériau de construction naturel et le seul qui se renouvelle naturellement, à ce titre, il offre des avantages incomparables.

- Le bois est un excellent isolant thermique naturel. A épaisseur égale, il est 6 fois plus isolant que la brique et 15 fois plus que le béton. C'est pour cette raison qu'on parle du bois comme une matière chaude. Une surface en bois ne donne jamais l'effet d'une "paroi froide" comme le font le verre, l'acier et le béton par exemple. Les excellentes qualités de rayonnement du bois sont un atout décisif pour obtenir un meilleur confort thermique à l'intérieur de la maison.

Les avantages uniques de la maison à ossature bois:

La chaleur et la fraîcheur
Les économies d'énergie
La lumière
La qualité de l'air
La quiétude
L'absence de produit toxique ou dangereux
L'absence de pollution électromagnétique
Durabilité de la construction
Délais de construction
Le rapport poids/résistance
L'esthétisme

- Pour toutes ces raisons la maison à ossature bois est la solution idéale en matière de construction, c'est le choix du bien être ...

Summary

Consortium Grensmaas

presentation by Peet Adams

Responsible county official and
Managing director Feedback

The river Maas had severe floods in 1993 and 1995, and the Dutch Government was under growing pressure to address the river's safety. The Project Grensmaas was launched. This project is the largest river project in the Netherlands, working on 43 kilometers of river between the cities Maastricht and Echt-Susteren. The project is carried out by the Grensmaas Consortium, made up of earthmovers, gravel mining companies and the Natuurmonumenten Foundation, a national foundation for Nature Conservation.

The project provides safety for tens of thousands of families that live along the river Maas, reducing the risk of a flood from once every 50 years to once every 250 years. This is achieved by substantially widening the river and lowering forelands. A new natural reserve of about 1000 hectares is created, financed by the proceeds of 54 million tons of sand and gravel.

The fall of 2008 sees the launch of the project Grensmaas in the village of Itteren. The first part, the villages Borgharen and Geulle, is completed. The river is broadened, the river can now discharge larger quantities of water. Nature is already claiming the shores and lots of species are returning to this part of Limburg. The project will be finished in 2024.

Summary

Le Contrat de rivière Ourthe

presentation by
Sophie Duchateau

Assistent director Ourthe river contract

One watershed, a river contract, actions!

There are 13 river contracts in Walloon Region. As new needs emerge (Moselle), one has to enlarge (Meuse aval). A river contract is a group of partners and users around a restoration, protection and enhancement of rivers program.

Active since 1998, the Ourthe river contract is one of the oldest in Walloon Region. Currently carrying out its fifth program which will end in 2016, it's gathering 71 partners around 7 goals. In these programs, measures are voluntary implemented by partners as part of their own skills.

The elaboration of the action program is based on a field survey, academic studies and issues raised by partners.

To realise the field survey, 2800 km of waterways are prospected by the river contract team. Catchments, wastes, invasive species such as himalayan balsam, giant hogweed, giant knotweed, barriers to the flow of water, erosion or due to livestock or spruces, deteriorated bridges, fountains, wells, deteriorated protections of shoreline, wastewater discharges, and other problems. This field survey is public and online on our website (www.cr-ourthe.be).

Seven goals:

- Continuing to improve the quality of water to ensure the multiplicity of use;
- Determining a set of measures to reduce flood damages;
- Participating in economic development and tourism in accordance with the aquatic environment and the water resources;
- Protecting and enhancing natural heritage;
- Protecting and enhancing cultural heritage;
- Improving information and consultation between river users;
- Implementing the means to survey.

Summary

District of Tomorrow

Guided tour
by Gabriel Bermans, Niels
Gras and Arno Claessen

How can we develop energy neutral new houses and buildings and how can we revitalize old buildings in an energy neutral way?

This was illustrated and explained during a field trip to The district of Tomorrow in Avantis industry region Heerlen and a visit of a fully energy neutral house of Arno Claessen in Meerssen.

Summary

Canal historique de Bernistap

presentation by
Luc Nollmont

Avant tout, il est nécessaire de planter le décor historique de ce que d'aucuns appellent le canal de l'Ourthe. Effectivement, par exemple, si l'on se trouve à Houffalize ou à Poulseur, le terme canal de l'Ourthe ne recouvre pas la même réalité.

Ainsi, si des projets de canaux étaient déjà présents dans l'esprit des romains quand ils occupaient notre territoire, c'est à l'époque de Guillaume d'Orange que de grands travaux ont été entrepris. Conçu en 1825 par l'ingénieur Rémy de Puydt, le projet visait à relier le bassin de la Meuse à celui du Rhin en passant par l'Ourthe et la Moselle. Pour ce faire, une canalisation du lit de l'Ourthe était nécessaire ainsi que la création d'écluses et d'un tunnel navigable au niveau de la ligne de crête partageant les eaux des bassins de l'Ourthe et de la Sûre, à Buret, sur la commune de Houffalize. De ce projet, 16 maisons éclésières ont vu le jour ainsi qu'une portion de ce fameux tunnel qui devait être long de 2500m.

Mais, la révolution belge et les décisions à prendre quant à l'unité territoriale du Luxembourg ont miné ce grand projet. Actuellement, seuls subsistent des vestiges de tunnel et de canal entre Bernistap et Buret ainsi que l'une ou l'autre maison éclésièrre difficilement localisables.

Quand, en 1839, la scission du Luxembourg fut entérinée, l'objectif de développer économiquement le Luxembourg, belge maintenant, refit surface et se concrétisa en 1857. A cette époque, une canalisation entre Liège et La Roche-en-Ardenne fut mise en œuvre, mais, de même, n'aboutira jamais. En effet, ici, c'est la concurrence du chemin de fer qui limita le projet à des réalisations entre Liège et Comblain-au-Pont. En amont d'Esneux, le canal fut désaffecté dès 1917. Par contre, la portion Angleur-Tilff fut encore utilisée pendant la guerre 40-45.

Workshops

From idea to reality

How we can use the projects as an inspiring example of good practice for all the other Douzelage towns and Europe?

Workshops about the different themes January 22nd 2015.

Discussions on how our input and common knowledge can be used regionally and on a more international basis, presented in Siret.

Workshop I: Project fire salamander and Meet the Bees

Conclusions:

- Both the bees and the firesalamanders are threatened by an Asian disease. This is an unwanted side-effect of globalisation, and very difficult to prevent from happening.
- The way the project "Meet-the-bees" is organised, with the involvement of expatriate inhabitants of the village, is an inspiration for many other projects.
- Communication and exchange of knowledge is very important for the succes of the projects and the protection of these species.

Workshop II. Moerveld and sustainability

Conclusions:

- Moerveld is a local project and very practical; this type of project can be organised anywhere in Europe.
- The project Moerveld is supported by the local community and teaches children about the importance and the opportunities of working with sustainability.

Workshop III. District of Tomorrow

Conclusions:

- The District of Tomorrow is about zero-energy buildings. We are running out of fossil fuels and renewable energy is the key for a sustainable future. This project proves that many techniques are already available for use in the building industry.
- Building is local, local rules and laws should not stand in the way of building zero-energy buildings.
- There are a lot of examples of zero energy buildings that are already operational.
- Focus on the younger generations and organise educational programs on zero-energy building.
- The building-industry should cooperate and adopt the techniques faster.
- EU-countries should share knowledge, the EU can do more to stimulate zero-energy building.
- Costs go before benefit.

Workshop IV. Buitengoed Geul en Maas

Conclusions:

- There are a lot of similarities between this project and the projects of Houffalize and Niederanven, like Deux Ourthes and Eislecktrail.
- Individuals, organisations and companies join together in the realisation of these projects. Create a platform for cooperation and communication.
- The goals should be challenging but also realistic and work on creating win-win situations.
- Public relations is a succes factor.

Final statement of Douzelage sustainability conference Meerssen

Joint Communiqué from Houffalize, Meerssen and Niederanven to be presented at the General Meeting of the Douzelage in Siret april 2015.

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Sustainable development calls for a convergence between the three pillars of People (social equity), Planet (environmental protection) and Profit (economic development).

From Idea to Reality

The Douzelage members of the Benelux towns – Houffalize, Niederanven and Meerssen – recognise the importance of cooperating to create a sustainable lifestyle. They support the European Union's 2015 drive to highlight sustainability. They recognise the importance of sharing and exchanging good practice in general and among partner towns in Europe especially.

Siret's initiative to have the Douzelage members towns inspire each other to sustainable initiative during the General Meeting in Romania in April 2015, is actively supported by organising a preparatory conference in Meerssen, in which Niederanven Douzelage, Houffalize Douzelage, the sustainability platform of Meerssen, Stella Maris College, conference centre 'Meet Anna' and Meerssen Douzelage are cooperating.

During the preparatory conference on 22, 23 and 24 January 2015 in Meerssen 50 inhabitants of the three towns got to know each other and a small dozen sustainable alternatives/projects in the three communities. Their meeting was enhanced by visiting 6 projects and sharing experiences in 6 workshops, by reflecting on all of those and writing recommendations for promoting sustainable initiatives within the Douzelage community and inside the European Union.

Sustainable initiatives can be promoted by:

1. Bringing together and encouraging initiators (**People**).
2. Formulating innovative municipal targets, such as 'the municipality will be self-supporting its energy needs by 2030' (**Planet, Profit**).
3. Canvassing for and gathering volunteers: without them the local initiatives, which we consider most effective, would not be possible (**People**).
4. Connecting schools in order to stimulate students, parents and teachers to apply the principles of sustainability in schools and homes (**People**).
5. In order to reduce the claim people lay on energy supplies and (limited) natural resources, making the recycling of resources and the repair of usable goods the standard. Technical lifespan should decide when something is replaced (**Profit**).
6. Making local council adopt a policy that makes a sustainable solution for the disposal of waste and water and the use of natural resources the standard in community rules (for instance adopting building regulations for zero-energy buildings) (**Planet**).

EUROPA In Meerssen inventarisatie duurzame initiatieven

Congres over duurzaamheid

door **Gwen Teo**

MEERSSEN – Onder aanvoering van de vereniging Douzelage vindt vanaf vandaag een duurzaamheidsconferentie in Meerssen plaats. Tijdens dit driedaagse evenement, dat de titel 'From idea to reality' draagt, bespreken overheden en organisaties uit Limburg (Meerssen en omgeving), België (Houffalize) en Luxemburg (Niederanven) de aanpak en resultaten van duurzame initiatieven met regionale, landelijke of internationale impact. Vanuit Nederland komen onder meer het Grensmaasproject en de Landgoederenzone aan bod.

Het doel van de bijeenkomsten

is dat landen van elkaar leren, stelt Wil Schrijnemaekers van Douzelage Meerssen. „Douzelage-zusterstad Houffalize beheert bijvoorbeeld een groot deel van de Ardennen. De wijze waarop de natuur daar wordt beschermd, is leerzaam voor ons.”

Workshops en excursies naar oordorp Moerveld in Moerveld en De Wijk van Morgen in Heerlen staan op het programma.

In totaal maken 27 Europese steden deel uit van Douzelage. Met als gezamenlijk doel de samenwerking tussen inwoners in de Europese Unie lokaal te bevorderen. De conferentie in Meerssen is een van de vijf soortgelijke evenementen die

de komende maanden plaatsvinden in verschillende landen. De resultaten worden in april geëvalueerd tijdens een grote bijeenkomst in de Roemeense stad Siret, waar het Douzelage-hoofdbestuur zetelt. In die plaats volgt tevens een grote overzichtstentoonstelling van uiteenlopende projecten die aan bod zijn gekomen.

Duurzaamheid staat dit jaar hoog op de agenda bij de Europese Unie. De Douzelage-conferenties vloeien dan ook voort uit een vraag vanuit Brussel. Wil Schrijnemaekers: „De Europese Unie hoopt op deze manier inzicht te krijgen in hoe dergelijke projecten het beste kunnen worden gestimuleerd.”

Aux Pays-Bas pour discuter « durablement »

La semaine dernière, une délégation de Houffalize était à Meerssen aux Pays-Bas pour discuter de développement durable.

« Antoine BILU »

Une délégation de Houffalize était à Meerssen aux Pays-Bas jeudi, vendredi et samedi derniers pour discuter du développement durable au niveau régional. Ces trois jours ont été organisés dans le cadre du programme du Douzelage. Trois communes étaient présentes à Meerssen aux Pays-Bas : Meerssen, ville hôte de l'événement, Niederanven de Grand-Duché de Luxembourg et Houffalize. Durant trois jours, ces villes du Douzelage se sont entretenues à propos du développement durable. « Cela s'est fait dans le cadre de l'axe européen de développement durable », précise Alphonse Henrard, président du comité du Douzelage de Houffalize. Ce projet consiste à créer une zone de développement durable d'un côté de la frontière pour contribuer à un monde plus durable. Chaque pays a ses initiatives et il est important de les partager.

Cinq présentations houffalaises

Parmi la dizaine de projets présentés à Meerssen, cinq venaient de la délégation houffalaise. « Soit une série d'initiatives présentées par Michel Trol, une randonnée de nos amis traversant la commune de Houffalize et ayant pour thème la qualité de l'air », explique Alphonse Henrard, président du comité du Douzelage de Houffalize. Vincent Vander Elst, président de la commune de Houffalize, a également présenté deux projets et de son importance dans la préservation des richesses naturelles. Le comité de milieu Charles a également présenté son projet de construction d'un centre de culture de maisons à énergie positive. Les villes de Meerssen et de Niederanven ont également présenté leur projet d'écoparc. En exemple, le projet d'écoparc expliquait comment dans une zone d'habitat de la Meuse pour préserver l'environnement. Ou encore l'importance des abeilles dans notre écosystème. Lors de ces expéditions, nos trois villes de Meerssen ont pu ainsi donner leurs conclusions au meeting de Siret en Roumanie où se réunissent toutes les villes du Douzelage en avril prochain.

Alphonse Henrard : « Consolider la jeunesse »

« Antoine BILU »

Président du comité du Douzelage de Houffalize, Alphonse Henrard veut sensibiliser les jeunes au développement durable.

Alphonse Henrard, tout d'abord, comment se sont déroulés ces trois jours à Meerssen ?

« Nous avons eu droit à une organisation parfaite. Les experts et les visiteurs étaient d'une grande qualité. Il était de voir les mêmes des conférences pour s'en rendre compte. Il y avait de la variété dans les thèmes abordés mais en étant toujours en rapport avec le sujet central de notre présence à Meerssen.

Comment avez-vous débatté les personnes formant la délégation houffalaise ?

Il fallait tenter de rester orienté vers les sujets proposés par Meerssen. Par exemple dans le cadre des écoparc non polluants, nous nous sommes réunies avec Nicolas Chénier pour qu'il vienne nous

Alphonse Henrard et la délégation houffalaise au sein de la délégation aux Pays-Bas.

Nous nous rendons compte de l'importance de la collaboration entre les villes pour avoir un monde plus durable. Nous avons également la preuve d'un niveau de trois municipalités, il y a moyen de réaliser quelque chose de concret grâce à tout ce qui se fait déjà à l'échelle locale. Et le regroupement à Siret de toutes les villes du Douzelage nous permettra de tirer encore d'autres conclusions.

Quel est le rôle de Houffalize dans le Douzelage ?

Dans un premier temps, nous devons être capables d'apporter ce qui se fait chez nous d'un point de vue pratique. On doit montrer ce que l'on fait. En second lieu, nous devons élargir notre champ d'action à travers la jeunesse. Cela passe donc par l'éducation, l'information et la communication. Il faut développer ce qui est déjà existant chez nous et sensibiliser la jeunesse à ces actions. Le but est donc de créer un esprit participatif autour du développement durable.

Que s'attendez-vous comme conclusions après ces trois jours ?

Duurzaamheidsconferentie

'Van Idee naar Realiteit', dat was het thema van de duurzaamheidsconferentie georganiseerd door de vereniging 'Meerssen in Europa'. Van donderdag 23 januari tot en met zaterdag 25 januari, vond er in Conferentiecentrum 'Ontmoet Anna' een voorbereidende conferentie voor de General Meeting van de Douzelage in het Raameense Siret plaats. Meer dan vijftig deelnemers uit het Belgische Houffalize, het Luxemburgse Niederanven en Meerssen maakten kennis met lokale duurzame initiatieven en wisselden ideeën en ervaringen op het gebied van duurzame ontwikkeling uit. Er werden onder andere lezingen gegeven over aan Luxemburgs bijenproject, het natuurpark 'Les Deux Ourthes' in de Ardennen en de bedreigde vuursalamander in het Bunderbos. Naast de vele inspirerende presentaties, bezocht het gezelschap projecten in de regio als het Grensmaasproject, Buitenplaats Vaeshartelt, mOERveld, De Wijk van Morgen en het duurzame huis van Arno Claessen in Raar.

In drie dagen tijd werden er vele ervaringen en ideeën uitgewisseld. Dit gebeurde in de vorm van workshops waarin de deelnemers uit Houffalize, Niederanven en Meerssen nadachten en discussieerden over de vraag hoe duurzame initiatieven op lokaal niveau bevordert zouden kunnen worden. Tijdens deze workshops bleek dat er in alle drie van de Douzelage-gemeenten op een verschillende manier wordt geprobeerd om bewustwording voor duurzaamheid onder de inwoners te creëren. In Houffalize werken honderden vrijwilligers aan het beheer van de rivier de Ourthe, in Niederanven leeft de gemeenschap rond de bijenkorf van imker Mark en in Meerssen groeien basisschoolkinderen al jaren lang op met de verhalen van Hans Webeling en beleven zo de wildste avonturen in mOERveld.

De afgelopen dagen bleek dat duurzaamheid wel degelijk leeft, maar nog lang niet bij iedereen. Lokale duurzame initiatieven zouden moeten kunnen profiteren van samenwerking en het uitwisselen van ideeën over de grens. Daarnaast is het van belang dat initiatiefnemers en hun idealen een podium krijgen om inwoners te kunnen inspireren. Duurzaamheid zal centraal moeten staan in het Meerssen van Morgen: thuis, op de werkvloer en op school. In het Meerssen van Morgen wordt globaal gedacht en lokaal gehandeld. In het Meerssen van Morgen krijgen groene ideeën de mogelijkheid om werkelijkheid te worden. Het Meerssen van Morgen, dat zijn u en ik. Want we moeten niet vergeten: morgen is de toekomst, maar ook de dag na vandaag.

Job Zomerplaat, scholier in de 6e klas van het vwo aan het Stella Mariscollège Meerssen

Vorbereidende conferentie 'van idee naar realiteit'...

Vorbereidende conferentie 'van idee naar realiteit', georganiseerd door Douzelage Meerssen in 'ontmoet Anna' op 23 t/m 25 januari jl.
door: Annigje Kruytbosch, voorzitter Douzelage Meerssen

Drie dagen kwamen zij bijeen: deelnemers uit Niederanven (Luxemburg), uit Houffalize (België) en Meerssen, geïnteresseerden, vertegenwoordigers uit de diverse gemeenten, NGO's alsmede IVN Maastricht en IVN Meerssen en het duurzaamheidsplatform, een aantal enthousiaste leerlingen van het Stella Mariscollège, duurzaamheidsspecialisten en zij die duurzaamheid geïncorporeerd hebben in hun bedrijf, vereniging of zelfs in hun eigen huis!

Doel van de conferentie was om meer te weten te komen over duurzame werkwijzen en initiatieven en te ervaren of deze initiatieven overeenkomsten vertonen met initiatieven uit de regio (Benelux). Kunnen wij van elkaars ervaringen leren en in hoeverre zijn lokale werkwijzen toepasbaar in de regio en zelfs daarbuiten?

De uitkomsten en aanbevelingen worden gebundeld en in april van dit jaar aangeboden en eveneens besproken in Siret (Roemenie). Daar vindt de jaarlijkse General Meeting van de Douzelage plaats waarin duurzaamheid dit jaar het hoofdthema vertegenwoordigd.

De reeds aanwezige infrastructuur van de Douzelage met vertegenwoordiging in elk EU-land biedt daardoor een unieke gelegenheid om op Europese schaal ideeën en werkwijzen met elkaar te delen. De meeste projecten zijn 'bottom-up': precies datgene waarvoor de Douzelage staat: van de burgers, door de burgers!

De presentaties waren enthousiast en aanstekelijk. Zo leerden wij dat er in Niederanven vrijwilligers tot parttime imker worden opgeleid. Dit om het dalende aantal imkers tegen te gaan én om de bijenpopulatie die geplaagd wordt door een dodelijke parasiet in stand te houden. Het idee is simpel en zeer effectief: gemeenschappelijke aanschaf van materiaal en gratis educatie tot parttime imker. Scholen incorporeren het bijenverhaal in hun lesprogramma en krijgen hun eigen educatieve imkerij. Een nieuw bewustzijn in natuur en ecologie is zo redelijk eenvoudig tot stand gekomen. Prof. Jacques Kimman nam ons in zijn verhaal mee naar 'the District of Tomorrow': een project dat tot doel heeft om energie-neutrale steden te verwezenlijken. Het verhaal was zo helder en bevlogen dat het bijna ondenkbaar is dat de meeste bedrijven nog steeds schoorvoetend achterblijven.

Vanuit Houffalize kwam onder andere het 'Parc Naturel des deux Ourthes' ter sprake. Een natuurgebied van 26 hectare dat een ecologisch netwerk heeft gecreëerd, waardoor het wildbestand een grotere kans heeft gekregen, boeren het rurale karakter van de regio bewaken, denkbos langs de meanderende beken is gekapt, waardoor plaatselijke planten en insecten weer vrij spel hebben en een duidelijke toename van het eco-toerisme tot stand is gekomen in deze regio. Dit alles zou overigens niet gerealiseerd zijn zonder de hulp van vele vrijwilligers! Dit is een onvolledige greep uit ons programma. We bezochten ook het Grensmaasproject, het educatieve mOERveld en de wijk van Morgen. Tevens leerden we over 'Buitengoed Geul en Maas' en buitenplaats Vaeshartelt, de constructie van duurzame woningen én de zieke vuursalamander en zijn mogelijke redding! Wilt u meer weten over deze onderwerpen, neem dan gerust contact met ons op. Zoekt u contacten of heeft u zelf ideeën, dan horen wij dat graag!
